

Foundations of Data Analytics

CS9D1

Student Number: 5591479

Module Tutor: Greg Watson

Department of WMG

University of Warwick

Abstract

This report discusses techniques from the module being applied to temporal data. The main technique discussed shall be Recurrent Neural Networks (RNNs) to analyse and predict price movements in assets on the stock market.

Acknowledgements

I would like to say a special thanks to Greg Watson for his lectures.

1 Introduction	1
1.1 Questions	1
2 Background	2
2.1 Temporal Data Analysis	2
2.2 Recurrent Neural Networks	2
2.2.1 Gated Recurrent Unit	2
2.3 Sequence to Sequence Network	2
2.3.1 Encoder	2
2.3.2 Attention Mechanism	3
2.3.3 Decoder	3
2.4 Technical Indicators	3
2.4.1 Relative Strength Index	3
2.5 Moving Average	3
2.6 Average True Range	4
2.7 Curse of Dimensionality	4
3 Dataset	5
3.1 Chosen Stocks	5
3.1.1 Microsoft	5
3.1.2 Vanguard S&P 500 ETF	5
3.2 Preprocessing data sets	5
3.2.1 Features	5
3.2.2 The two resulting feature spaces of the models	6
3.3 Data Normalisation	6
3.4 Data set split	7
4 Methods	8
4.1 Training Environment	8
4.2 Multivariate GRU	8
4.3 Multivariate Sequence to Sequence	8
4.4 Hyper parameters	8
5 Results and Evaluation	10
5.1 Back testing	10
5.2 Performance Metrics	10
5.2.1 RMSE	10
5.2.2 R2	11
